

David Tsofin

Senior Backend Engineer | Technical Lead

Bratislava, Slovakia (EU work permit, contracting via own entity) | tsofindavid@gmail.com | [linkedin.com/in/tsofindavid](https://www.linkedin.com/in/tsofindavid)

Professional Summary

Backend engineer and technical lead with 6+ years building distributed systems for enterprise B2B SaaS, primarily on Node.js/TypeScript. Currently technical lead for the backend of an enterprise Salesforce DevOps platform, owning architecture, API design, data consistency and production reliability for a product used by an enterprise client base migrating from a legacy solution. Act as the technical point of contact for large enterprise clients, including custom architecture work for a Fortune 500 account. Comfortable across the stack — from system design and code review to hands-on infrastructure (Docker, AWS, observability).

Technical Skills

Languages: TypeScript, JavaScript, Go, Java, Python, C#, SQL **Backend & Architecture:** Node.js, NestJS, Express, Koa, Spring Boot, Flask, ASP.NET Core, REST API design, microservices, event-driven architecture, gRPC, distributed systems, system design **Databases & Storage:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Amazon S3, Qdrant, pgvector **Messaging:** RabbitMQ, gRPC, asynchronous/event-driven processing **Cloud & Infra:** AWS (Lambda, ECS, S3, RDS), Docker & Docker Compose (daily), Kubernetes (working knowledge), Terraform (working knowledge) **Observability:** Prometheus, Grafana, ELK stack **Security & Identity:** OAuth2, OIDC, SAML (integrated), authentication/authorization, access control **Salesforce Ecosystem:** SOQL, Apex, Metadata API, sfdx (working knowledge — architectural level) **Practices:** technical leadership, system design, code review, mentoring, performance review, production incident response/on-call, client-facing technical consulting, presales technical calls

Professional Experience

Success Craft — Backend Engineer → Technical Lead

Feb 2022 – Present | Remote (B2B contract)

Enterprise Salesforce DevOps platform (B2B SaaS) — a Git-like release and change management tool for Salesforce development. ~100-person company, ~50 engineers; owned technical quality for a product team of ~30, including ~15 backend engineers.

- Joined as a backend engineer and grew into technical lead of a ~30-person product team (~15 backend engineers), owning architecture, technical direction, design and code review, and delivery
- As a backend engineer, designed the core change-tracking storage system: a Git-like model with structured metadata in PostgreSQL and client data in Amazon S3, processing hundreds of GB daily
- As technical lead, drove the architecture and technical execution of a ~2-year migration moving several hundred enterprise clients from a native DevOps product onto the new cloud platform

- Designed and shipped the public REST API and integration layer connecting the platform to Salesforce and ServiceNow ecosystems
- Built and operated the platform's microservices architecture on AWS (Lambda, ECS, S3, RDS) with RabbitMQ for asynchronous processing
- Designed and built AWS infrastructure emulating a Fortune 500 client's private network to meet their security requirements, acting as lead technical contact for the engagement
- Serve as technical point of contact for enterprise clients: presales technical calls, custom architecture and platform adaptation for large accounts
- Grew 3 engineers into fully independent contributors; conduct regular performance reviews
- First responder for production incidents; set up and maintain observability (Prometheus, Grafana, ELK)
- Integrated OAuth2/OIDC/SAML for enterprise authentication requirements

Stack: Node.js, NestJS, TypeScript, PostgreSQL, MySQL, AWS (Lambda, ECS, S3, RDS), RabbitMQ, Docker, Kubernetes, Terraform, Prometheus, Grafana, ELK

Whale Studio — Backend Engineer

Jun 2021 – Feb 2022

High-traffic e-commerce and real-time multiplayer gaming backends.

- Built a real-time multiplayer backend on WebSockets (Socket.io) handling concurrent user sessions at scale
- Reduced latency and improved throughput on high-traffic e-commerce systems through Redis caching strategies and PostgreSQL query optimization

Stack: NestJS, Socket.io, PostgreSQL, Redis

Alpha Orion — Full-Stack Developer

Sep 2019 – Jun 2021

Software for unmanned systems and industrial hardware testing.

- Built backend systems for a UAV fleet management platform (fleet state, telemetry, mission data)
- Developed full-stack tooling for industrial hardware testing across the whole stack: backend services, an Electron.js desktop client, and the embedded (Arduino) layer
- Applied a mechanical engineering background to hardware-software integration work

Stack: ASP.NET Core, C#, PostgreSQL, RabbitMQ, JavaScript, Electron.js, Arduino

Projects

ReplaySense AI (replaysenseai.com) — Go, React Designed, built and shipped a live SaaS product solo in ~4 weeks: an AI agent that automates Instagram DMs, learning an account's communication style from posts and conversation history. Running in production with free and paid tiers.

Legal Document RAG Platform — Java, Spring Boot End-to-end Retrieval-Augmented Generation system for legal professionals: ingestion pipeline, vector search (Qdrant, pgvector), LLM integration, REST API, Vue.js frontend. Confidentiality and access control designed in from day one.

AI Document Automation for Tender Submissions (Freelance) — Node.js AI pipeline turning raw client data into ready-to-submit tender documents, with prompt engineering for deterministic, correctly structured output on messy real-world input.

Education

Slovak University of Technology, Bratislava — BSc, Applied Informatics (2024 – *Present*)
Belarusian National Technical University — IT and Robotics (2018 – 2020)
